About PointMatter

PointMatter is a software platform that provides reporting solutions for BACnet-compliant Building Management Systems and other IoT devices. PointMatter Reporting Solution (PRS) runs on Microsoft's Windows 10 and Windows Server operating systems.

This version of PRS supports the Alerton Compass BMS. PRS gives Compass operators the ability to report and analyze the performance of their buildings and monitor critical spaces and equipment. PointMatter communicates with Compass to report on objects such as Points, Devices, Alarms, Energy and Trends for reporting purposes.

The PointMatter platform contains several components. The components are:

1. **PointMatter Setup App**

The PointMatter system is shipped within a zipped file. After the zip file is unpacked, the file *PointMatter Setup* program is run to install the *PointMatter Installation and Configuration App* on the computer's desktop.

2. **PointMatter Installation and Configuration App**

This application does the initial setup and configuration of the PointMatter Reporting Solution. It also is used for the on-going administering of PRS. Refer to the *PointMatter Installation and Configuration Guide* for instruction on use.

3. **PointMatter Reporting Solution** - This is the application that is used to run reporting and add-on applications. This document is the user's guide for *PointMatter Reporting Solution*, referred to as **PRS**. PRS is accessed using a browser on the Windows computer. The web page is referred to as the *PM Portal*.

Purpose

This document is intended for end-users of PRS. It provides instructions on how to use the PRS browser-based app to access all the reporting features in PRS. The document assumes that PRS is set up correctly and the manager or end-user is logging into the PRS Portal to run applications and produce reports.

Audience

This document is intended for System Integrators, Dealers, Facility Managers, and other users interested in learning to use the PointMatter Reporting Solution.

PointMatter Reporting Services (PRS) Versions and Features

There are two editions available: BASIC and PREMIUM.

PRS Features & Apps PointMatter Reporting Solution	BASIC	PREMIUM
PRS VERSION 1.0		
BASIC Apps 1. Trend App 2. Alarm App 3. Energy App 4. Ad-hoc Analysis App		
PREMIUM Apps 1. Critical Environment 2. Critical Equipment		
Standard Templates Alarm, Energy, and Trendlog Supports the idea of multiple templates to customize reporting and has one or more pre-installed templates for defining reports.		
Custom Templates PRS provides administrators of the PRS system tools to install custom templates for each app that supports additional templates.		
Features • Portal for Tenant/Site Web UI • Search/Find Configuration • User & Report Management • Report Scheduling & emailing • Report File Download • System Activity & SLA reporting • Embedded SQL Express 2017 • Multi-site Capability • 10 GB Database Limit Per Site		

PointMatter Portal Overview

The PointMatter (PM) Portal is the web user interface that enables Managers and Users to connect to PRS for creating, scheduling and emailing reports. The default access URL to the PM Portal is setup by the PRS administrator using the PointMatter Installation and Configuration App.

PointMatter Apps

PointMatter version 1.0 comes with pre-bundled Apps. The PREMIUM edition adds the Critical Environment and Critical Equipment Apps.

	APP Name	Description
1	Ad-Hoc Analysis	Ad-Hoc Analysis of Trends and Alarms
2	Alarm	Summary report of all alarms and activities. Tracks critical alarms, recurring alarms, and alarms per shift
3	Trend	Reporting for trendlogs. Displays a single axis with multiple data points on a single chart
4	Energy	Displays energy consumption and demand
5	Critical Environment	Track regulatory compliance in critical environments (e.g., Operating Rooms)
6	Critical Equipment	Measure compliance data during equipment load testing (e.g. testing generators)

Quickstart

Start a web browser. The preferred web browser for PRS is Chrome. Other browsers will work but some UI elements may break.

If you are running PRS on the computer it was installed on, URL for PRS is:

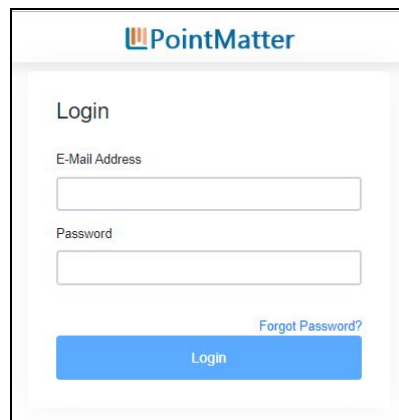

localhost:88/auth/login

The default port is 88. If you used a different port in the PointMatter Installation and Configuration app, be sure to use the correct port number for your site.

If you are accessing PRS from another computer, use the IP address or hostname for that computer instead of *localhost*.

Logging in for the first time

PRS is shipped with a manager account already setup. Enter the username and password in the login screen:

A screenshot of the PointMatter login interface. At the top is the PointMatter logo. Below it is the heading "Login". There are two input fields: "E-Mail Address" and "Password". To the right of the "Password" field is a link that says "Forgot Password?". At the bottom is a blue button labeled "Login".

Default Manager Account: ***pmmanager@pointmatter.com***

Default Password: ***pmmanager@Point\$23*** (Note: this is case sensitive)

Opening Screen

PRS is a web app. Along the top is the version number, the *Tenant* name (this is the name you gave during installation), a search bar, global date picker, scheduler, help, and the logout buttons.

On the left side is the navigation menu. In the middle are the PRS apps.

Top Bar

On the left side of the top bar is a button (with 3 horizontal lines) that will expand the left side menu to include descriptions.

Next is the version of PointMatter. The Trial Beta Version is the current version. Its license will expire by the end of 2020.

The Tenant information is next. PRS can be run as a stand-alone system, as a cloud app, and it can have multiple tenants. A tenant is a site. For Alerton Compass, it is one repjob. If your organization runs multiple repjobs, you can access reporting to each from PRS.

Note that in the Trial Beta Version, only one tenant can be active.

This is a picture of the right side of the top bar.

Important note: This section of the top bar contains features that are not fully developed for the Trial Beta Version.

The *Search bar* is not a complete feature. It will work to search and get information on Alarms, Devices, Energy logs, Points, and trendlogs.

Search will only list information about the device, point, or log. It currently does not do ad-hoc reporting.

The next button is the Global Date Picker. This is not a fully developed feature and should be ignored for this release.

The Clock button shows all *Scheduled Reports*. If you have scheduled one of the apps to run a report on a recurring basis, the schedule will be listed.

The Help Icon will list the specific version and build of PRS that you are running.

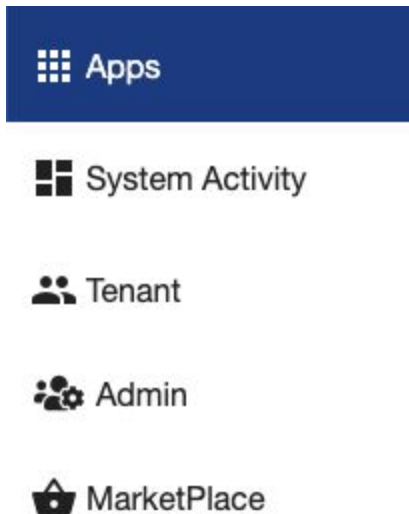

The final button will display as the first initial of your username, in this case a P. Click on this button to access the Logout button.

Sidebar Menu

There are two versions of the sidebar menu. One for Administrators and one for Users. The normal user accounts will only have access to PRS Apps. An administrator account will have additional buttons. This section will cover the administrator sidebar menu.

The image above shows the administrator's PRS sidebar in its unexpanded state. Clicking the 3 horizontal line button directly above this menu, in the top bar, will expand the sidebar to display descriptions next to each icon.

Apps is the default screen when logging into PRS. You can access any app by clicking on it.

System Activity contains a lot of status information on data connections, reporting activity and more. The opening screen for System Activity gives a high-level view of how PRS is functioning.

Tenant will list all of the tenants associated with this instance of PRS. For the Trial Beta Version, this will only list one tenant. If you click on the Tenant name in the middle of the

screen, it will display the contents of PRS's config.ini file (located in the c:\pointmatter... directory tree). This file is normally updated by running the PointMatter Installation and Configuration App. Advanced users can edit this file directly. Looking at the config.ini file will provide information on how PRS is configured.

Admin is used to manage users and to manage reports.

You can add and deactivate users. There are two types of users - *administrators* and *users*. The manage reports section lets you edit any report that you have permissions to edit - if the account is an admin account, you can edit any report for any user. From this section you can give access to a report to any user, schedule the report to run, and run the report.

Applications

This section provides details on each PRS application. Ad-Hoc, Alarm, Trend, and Energy are reporting apps included in the Basic version of PRS. The Critical Environment and Critical Equipment apps are included in the Premium version of PRS.

Ad-Hoc Analysis App

Note 1: this app will be updated with a new UI in an upcoming release. It will be given two buttons - Ad-hoc Alarm Reporting and Ad-hoc trendlog reporting. In the current UI, the user must click "Show all alarms" or "Show all trendlogs" to report on either alarms or trendlogs.

Note 2: The Ad-hoc Analysis app will only report on data that is in the PRS database. In the PointMatter Installation and Configuration application, the administrator selected what data to collect. The options are:

1. *Send All Alarm History.* This is the default. All alarm data is available in the PRS database.
2. *Send All Priority History.* This will send interval data on a scheduled basis (default is every hour) for trendlogs *that are included in a PRS report*. If a trendlog is not included in a PRS report, no data for that point will be in the PRS database.
3. *Send All Trendlog History.* This will schedule every trendlog in the BMS to be sent to the PRS database. If this is scheduled, it will update the database every hour by default.

Warning: This may be a large amount of information. If greater than 10 gigabytes, this will cause PRS to fail.

Note 3. A future enhancement will be to allow the user to pull specific trendlog data into the PRS database on an ad-hoc basis. For instance, to check a room's temperature for the past 1 week.

The screenshot shows the PointMatter AD-HOC ANALYSIS interface. The top navigation bar includes the PointMatter logo, a tenant dropdown set to 'General Hospital', and a search bar with 'All' selected. The main content area is titled 'AD-HOC ANALYSIS' and contains a section 'All Alarms and Trendlogs'. This section is divided into two tables. The first table, 'Alarm', lists five items: General_AHU-75 Supply Fan, EEO 6; AHU-81, Supply Fan Alarm, EEO 2; General_AHU-81 Return Fan, EEO 3; General_AHU-81 Duct Smoke Detector, EEO 4; and AHU-25 High Duct Humidity Alarm, EEO 11. Below this table is a summary row showing '5 of 1042' and a 'Show all Alarm' button. The second table, 'Trendlog', lists five items: General_VAV 62-005_Space Temp, Trendlog257; General_VAV 62-005_Supply Air Temp, Trendlog259; General_VAV 62-005_Current CFM, Trendlog261; General_VAV 62-005_ Trendlog285; and General_VAV 62-005_ Trendlog286. Below this table is a summary row showing '5 of 3539' and a 'Show all Trendlog' button. Both summary rows have their respective 'Show all' buttons highlighted with red boxes.

After selecting the Ad-Hoc Analysis App from the Apps menu, the application will display a list of the first 5 configured Alarms and Trends.

To report on an alarm or trend, click on the “Show All Alarms” or “Show All Trends”. This will switch the app to show a listing of all configured alarms or trends. The example below shows all trendlogs:

The screenshot shows the PointMatter AD-HOC ANALYSIS interface with a detailed list of trendlogs. The top navigation bar is the same as the previous screenshot. The main content area is titled 'AD-HOC ANALYSIS' and contains a section 'Showing 1 - 10 of 286 results for "Trendlog"'. Below this section is a table with the following columns: Trendlog Name, Trendlog Description, Log Dev Number, Log Instance Number, Engineering Units, and Data Availability. The table lists 10 trendlogs, each with a checkbox in the first column. The data is as follows:

Trendlog Name	Trendlog Description	Log Dev Number	Log Instance Number	Engineering Units	Data Availability
☐ Trendlog 6	A/C 2 Supply Air Temperature	401	1	no units	No
☐ Trendlog 87	MOB2-SR8-RA-CFM	358	3	cubic feet per minute	No
☐ Trendlog 86	MOB2-SR8-SA-CFM	358	2	cubic feet per minute	No
☐ Trendlog 84	MOB2-SR8-DSP	358	1	inches of water	No
☐ Trendlog 81	MOB2-SR7-DSP	357	3	inches of water	No
☐ Trendlog 80	MOB2-SR7-RA-CFM	357	2	cubic feet per minute	No
☐ Trendlog 79	MOB2-SR7-SA-CFM	357	1	cubic feet per minute	No
☐ Trendlog 78	MOB2-SR7-SA-TEMP	357	0	degrees Fahrenheit	No
☐ Trendlog 77	MOB2-SR6-RA-CFM	356	3	cubic feet per minute	No
☐ Trendlog 76	MOB2-SR6-SA-CFM	356	2	cubic feet per minute	No

At the bottom of the table, there is a pagination bar showing '« Previous 1 2 3 4 5 ... 29 Next » (1 - 10 of 286) Records Per page: 10 25 50 100'. A 'Plot' button is also visible in the top right corner of the table area.

All the columns in the table view are sortable.

At the top of the table is a filter. As you type, the filter will be applied.

To get the detailed information on a specific object, click on the hyperlinks for Trendlog Name or Trendlog Description.

Important:

If data is available for the trendlog, the Data Availability column will have a “Yes” in it. If this column lists “No”, no data for that point exists in the PRS database. See notes at the start of this section.

All alarm data is stored in the PRS database. If Compass does not have an instance of an alarm, that alarm will be listed as “No” in the PRS data availability.

Create an Ad-Hoc Report

Step 1

Sort the Data Availability column by clicking on the Data Availability header in the table.

Step 2

Use the filter to find the trend you are looking for or page through the list of using the numbers at the bottom of the screen.

Step 3

Select the trendlog or multiple trendlogs from the list. You can select up to 10 trendlogs to view in a single ad-hoc report.

Step 4

Click on the Plot button to create the report.

Critical Environment App

Critical Environment reports are created to track the regulatory compliance for defined locations and facets to track compliance.

These reports use the defined Standards against each facet to track the compliance which is associated with a defined location.

Read more on these section to

1. Configure and manage Standards
2. Configure and manage facet
3. Configure and manage Locations

Create a Critical Environment report

Step 1: Select the Critical Environment App from APP list

User will see the list of already created reports

This report view will be filtered based on if the logged-in user is PM Manager or PM user.

- PM Manager will be able to see all the reports created for this APP
- PM users will see the list of reports which are created (owned) by him and reports that are assigned to him.

Critical Equipment App

Critical Equipment reports are created to track the regulatory compliance for defined Equipment to track compliance. These reports use the defined Standards against each facet to track compliance, which is associated with a defined Equipment.

1. Configure and manage Standards
2. Configure and manage Facet
3. Configure and manage Equipment

Create Critical Equipment report

Step 1: Select the Critical Environment App from APP list

User will see the list of already created reports

This report view will be filtered based on if the logged-in user is PM Manager or PM user.

- PM Manager will be able to see all the reports created for this APP
- PM users will see the list of reports which are created (owned) by him and reports that are assigned to him.

CRITICAL EQUIPMENT					
Configure Reports List + Create Report					
Filter					
Report Name	Last Run	Last Modified	Modified by	Created by	Actions
Demo Generator 1 Report	2019-12-11 18:59:04	2019-12-04 10:43:20	pmadmin@logicmatter.com	pmadmin@logicmatter.com	Edit Play Refresh Delete
Description	Demo Generator 1 Report test				

Step 2: Select Create Report option to create a new report

Step 3: Provide Report parameters

All “*” marked parameters are required parameters.

Select Template Alarm Based Equipment Condition R...	*Image URL null	*Equipment Size null
*Report Name Report name	*Report Title null	*Fuel Type null
Report Description Report Description	*Equipment Model null	*% Load Color Format null
*Select Equipment Select Equipment	*Make null	*% Load null
*Duration Today	*Rating null	*Conditional Format Colors null
	*Serial Number null	*Instance Run Time(in minutes) null

- Select Report template to use
- Provide Name and Description of the report
- Select Equipment from the dropdown to report for compliance reporting - By Default, no location is selected.
- Select the duration for the report from the predefined values or select a custom Start and End dates
- Report Parameters
 - **Report Title:** Report name is displayed in the report (Ex: Generator Report)
 - **Image URL:** It should be a URL of the Equipment and it will display in the report only PNG image type is supported
 - **Make:** Enter the Equipment type (Ex: Caterpillar)
 - **Equipment Model:** Enter Equipment Model (Ex: Caterpillar 1234)
 - **Serial Number:** Enter the Serial Number of the Equipment (Ex: 9876 or Cat1234)
 - **Rating:** Enter the Capacity of an Equipment (Kilowatts rating Ex: 530KW). This Kilowatts Rating is the size or capacity of an Equipment
 - **Fuel Type:** Enter the fuel type of an Equipment (Ex: Diesel, Petrol, etc..)
 - **Equipment Size:** Enter the size of an Equipment (Ex: Medium, Large, etc..)
 - **% Load:** Load percent accepts three setpoint values. Based on the three setpoint values report will show the color coding for Kilowatts load object (Ex: 30,60,90)
 - **% Load Color Format:** Enter 4 color with ‘,’ separated values, these colors will apply to the third column for KW object in the report (**Ex:** blue, green, brown, red)
 - **Conditional Format Colors:** Enter three color names with ‘,’ values and these colors will apply for remaining conditions columns in the report (**Ex:** blue, green, red)
 - **Instance Run Time(in minutes):** Provide the Instance Run time in minutes in the below field, this will be displayed in the report header (besides the equipment image), and It indicates the minimum time period for which a test should run so that it can be called a Test(**Ex:** 30)

Hover over the parameter labels to get the details about the parameters.

Step 4:

Press “Preview” to preview the report. Once you have the data and report format correct press “Save” to save the report

Save

Preview

Deviation from compliance will be marked in **RED** in the report.

Critical Report Configurations

Configure and Manage Facets

[For Critical Environment and Critical Equipment App]

Facets are defined and added into the system for compliance monitoring for them. These Facets will be used for creating different standards by applying different conditional criteria on the given Facet specific for the standard rules.

The defined Facets are used while creating/updating a Standard.

Click on the Configure link in APP View

CRITICAL ENVIRONMENT	 Configure	 Reports List	 Create Report
CRITICAL EQUIPMENT	 Configure	 Reports List	 Create Report

List of Default Facets will be listed in Facet list view under the Facet tab

- User will be able to define/update Facets used by the critical environment and Equipment under this tab in the application.
- The application gives the flexibility to define all the Facets in one single table
- User can filter the table by providing filter text, filter value is applied to all the columns except the Actions column.

CRITICAL ENVIRONMENT		 Configure	 Reports List	 Create Report
Facet Standard Location Filter + Add Facet				
Facet	Facet Unit	Action		
Temp	°C			
Coolant Temperature	degrees fahrenheit			
Oil Pressure	pounds force per square inch			
Battery Voltage	volts			

CRITICAL EQUIPMENT		 Configure	 Reports List	 Create Report
Facet Standard Equipment Filter + Add Facet				
Facet	Facet Unit	Action		
Temp	°C			
Coolant Temperature	degrees fahrenheit			
Oil Pressure	pounds force per square inch			
Battery Voltage	volts			

Add New Facet

Select the “Facet” Tab under the configuration section and click on “ADD” Facet

The screenshot shows the 'Facet' configuration screen with the 'Facet' tab selected. A filter input field is present. Below the tabs is a table with the following data:

Facet	Facet Unit	Action
Temp	°C	

The '+ Add Facet' button is highlighted in the top right corner.

Provide Facet Details like Facet Name and Facet Unit

All “*” marked parameters are required parameters.

The screenshot shows the 'ADD FACET' form. It has tabs for 'Facet', 'Standard', and 'Equipment'. The 'Facet' tab is selected. The form contains two required fields, both marked with a red asterisk (*):

- FACET NAME**: Input field with placeholder text 'Facet Name'.
- FACET UNIT**: Input field with placeholder text 'Facet Unit'.

At the bottom, there are 'Back' and 'Save' buttons.

Press SAVE to Facet the facet

Edit Facet

Click on the Edit icon in the Facet list

The screenshot shows the 'Facet' configuration screen with the 'Facet' tab selected. A filter input field is present. Below the tabs is a table with the following data:

Facet	Facet Unit	Action
Temp	°C	
Coolant Temperature	degrees fahrenheit	
Oil Pressure	pounds force per square inch	

The edit icon for the 'Temp' facet is highlighted with a red box.

Update the information on Update Facet screen and select “Update”

The screenshot shows the 'UPDATE FACET' form. It has tabs for 'Facet', 'Standard', and 'Equipment'. The 'Facet' tab is selected. The form contains two required fields, both marked with a red asterisk (*):

- FACET NAME**: Input field with placeholder text 'Temp'.
- FACET UNIT**: Input field with placeholder text '°C'.

At the bottom, there are 'Back' and 'Update' buttons.

Configure and Manage Standards

[For Critical Environment and Critical Equipment App]

Click on the Configure link in APP View

Report Management

This section describes the common features of managing reports

Report List/View

Each APP has a List of created reports as the landing page. Here users can see a list of all created reports based on the assigned user role.

User with PointMatter Manager role - Can see all created reports for the APP

User with PointMatter User role - can only see the reports which are created by him and reports which are assigned to him.

Filter					
Report Name	Last Run	Last Modified	Modified by	Created by	Actions

Columns in the Report list view

- **Report Name:** Name of the report
- **Report Description:** A brief description of the report provided by the report owner.
- **Last Run Time:** Date and Time when report was last executed
- **Last Modified Time:** date and time when the report was last modified.
- **Modified by:** Email of the the user who modified it
- **Created by:** Email of the user who is the creator/owner of the reports
- **Actions:** There are 4 Actions available
 - **Edit Report:** To Edit and update the report - by clicking on this report will open in respective app in edit mode
 - **Run Report :** To Run the report - by clicking on this the report will open in the respective app and will Run with the saved parameter values.
Users can also run the report by clicking on the Report name, which is a hyperlink to run the report.
 - **Schedule Report:** To create a new schedule or update an existing schedule the report - this will open up the scheduler screen for users to provide information and schedule report or edit the already existing schedule.
 - If report is already scheduled, then the “Schedule” icon will appear in green color
 - **Delete Report:** To delete the selected report - ONLY Report Owner can delete the reports.

Users can filter the table by providing filter text, filter value is applied to all the columns except the Actions column.

Edit Report

Reports can be edited ONLY by the Report Owner and user with PointMatter Manager role.

Assigned users can only change the parameter values and preview the report, but can not update/edit the report.

Users can edit the report click on the EDIT icon in Action column in the report list view or edit it from Report view screen.

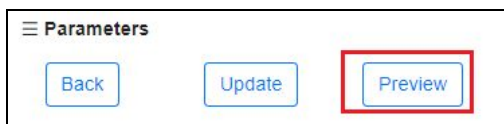

Step1: Click on the Edit Icon in the report list view, this will open the report in EDIT mode in respective APP

Step 2: Change the report parameters, under the “Parameters” section.

Step 3: After changing report parameters, Press “Preview” to preview the report.

Step 4: Once you have the correct data and report format, press “Update”, this will permanently save the changes made to the report.

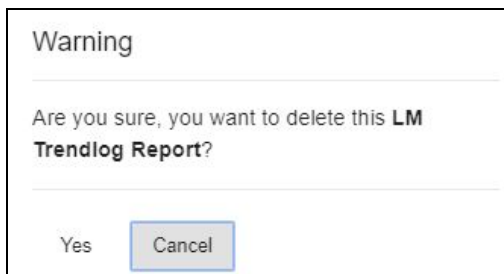

Delete Report

Reports can be edited ONLY by the Report Owner/Creator.

To delete the report click on the Delete icon in the Report List View

Application will ask for user confirmation for deletion of the report.

Select "YES" to delete the report and "Cancel" to discard the action.

Download Report

Step 1: Select the report in in APPS “Report list View”

Step 2: RUN the report by clicking on the Run Icon in Actions column

Step 3: On the Report view Banner Click on the icon for **PDF, Excel or CSV** to download the report in selected format.

Schedule Reports

To configure the scheduled execution of reports and sending email, user can schedule reports created using PointMatter Apps.

Create New Schedule and Send reports by email on a set schedule

Step 1: Click on the APP, you will see the Report List view.

Step 2: In Report list View, Click on “Schedule” icon.

Step 3: New Schedule screen will appear

Step 4: Select the Report format (PDF or Excel)

Step 5: Type in the Email Addresses, Separated by commas.

Step 6: Edit date and Time

Step 7 : Edit Repeat - to have a recurring schedule.

Step 7: Click Create Schedule

Reports will be created and emailed on the specified schedule time.

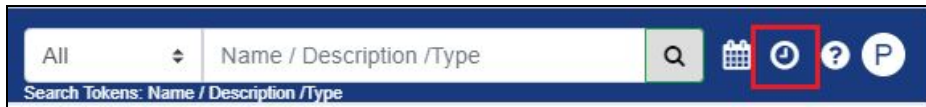

All Repeat schedules will be listed in Schedule List view of the PointMatter.

Use Schedule list view, to edit the existing repeat schedules.

Schedule List/View

PRS provide a feature to view and manage all recurring (Repeat) scheduled reports at one place.

To view the List of all scheduled reports, click on Schedule icon on PointMatter Application banner in the top right.

List of schedule reports will open up, where users can view list of all Repeat schedules based on assigned user role.

User with PointMatter Manager role - Can see all created reports for the APP

User with PointMatter User role - can only see the reports which are created by him and reports which are assigned to him.

Manage User Assignment for Report

Click on the Assigned user icon under the Action Column

This will show the list of users along with the report details in the top section of the screen

ASSIGN USERS TO REPORT

Report Name: Demo Critical Environment Report

Description: Demo Critical Environment Report.
This is a Test report

Report Owner: pmadmin@logicmatter.com

Created On: 2019-11-19 20:31:54

Y Filter

#	Assigned	First Name	Last Name	Email	User Status
1	☒	Rajesh	Motapalukula	rajesh@logicmatter.com	Active
2	☐	Daniel	J	xxxx@xxxxxxx	Active

Update Report Access
Cancel

- The “Assigned” column in the list shows the assignment status,
- if Assigned value is checked then this report is assigned to this user
- To revoke the assignment uncheck the “Assigned” value and press “Update Report Access”
- Assigned more users to report by Checking “Assigned” value and press “Update Report Access”.

Report owner name will not appear in the list - it is present in the report description section at the top.

A report is already assigned to the report owner and its assignment cannot be changed.

User Management

Pointmatter provides an option to create and manage different PointMatter users. This option is available for the users having the PointMatter Manager Role.

PRS makes it easy for the SI/FM to create users and assign reports to users. The system provides a standard mechanism of managing users which is described in detail in this section.

User Roles

PRS has two main types of roles supported in PM Portal for managing reporting solutions.

1. **Manager Role** - this user role that can do the following:
 - a. Create and manage users
 - b. Assign and Manage reports
 - c. View and Manage Tenants
 - d. Access the System Activity Dashboard and SLA reports
2. **User Role** - only access reports
 - a. Create and manage their own created reports - Execute, Preview, download and Schedule reports
 - b. Assigned Reports - Execute, Preview, download, and Schedule

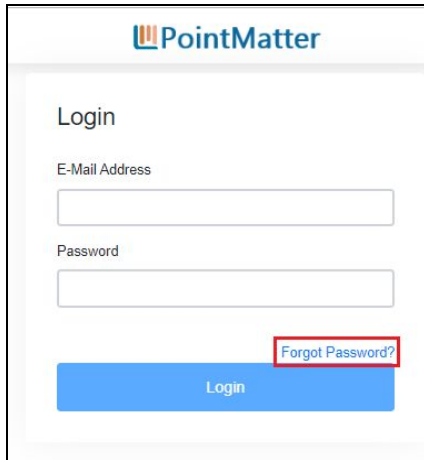

Role Permissions

	Feature	Available for PointMatter Manager	Available for PointMatter User
	View APP listing	Y	Y

Forgot Password

Click on the “Forgot Password” link to get a password

The login form features the PointMatter logo at the top. Below it, the title "Login" is centered. There are two input fields: "E-Mail Address" and "Password". To the right of the password field is a red-bordered link labeled "Forgot Password?". At the bottom is a blue button labeled "Login".

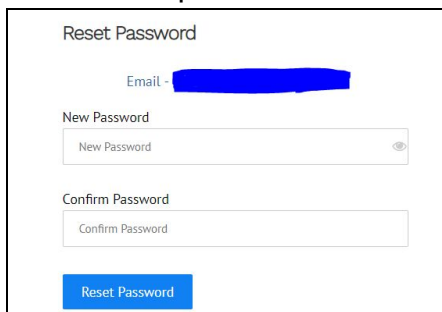

Provide registered email to reset password

The "Forgot Password" form has the title "Forgot Password" at the top. Below it is an "E-Mail Address" input field. A red error message "Email is required" is displayed below the field. A note states "Reset Password link will be sent to the provided mail". At the bottom is a blue button labeled "Reset Password".

Reset Password

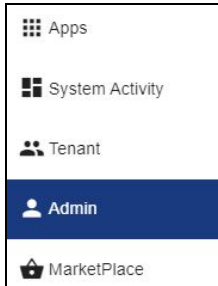

Click on the password reset link in the mail to set a new password

The "Reset Password" form displays the title "Reset Password". Below it, the email address is shown as "Email - [redacted]". There are two password input fields: "New Password" and "Confirm Password". Each field has a small eye icon to toggle visibility. At the bottom is a blue button labeled "Reset Password".

List existing users

1. Click on Admin in the side Navigation Menu

2. Click on the “Manage Users” Tab, List of All users will be shown

Manage Users		Manage Reports				
Filter		+ Create User				
#	First Name	Last Name	Role	Email	ActiveInactive	Actions
1	Rajeev	Pare	User	XXXXXXXXXXXXXXXXXXXX@XXXXXXXXXXXXXX	☒ Active	
2	User	Demo	User	XXXXXXXXXXXXXXXXXXXX@XXXXXXXXXXXXXX	☒ Active	

List View columns

- **First Name** : Provides the First Name of the user
- **Last Name**: Provide the Last Name of the user
- **User Role** : Provides information on Role assigned to the user
- **Email Address** : Users email address
- **User Activation Status**: Provides option to activate or deactivate user
- **Actions**: Provides option to view the list of reports assigned to the user

PointMatter Manager can

- Create a New User
- Activate or deactivate a user
- View the list of Reports assigned to the user

Create a New user

To create a new PointMatter user follow these steps:

Step 1: Click on the “Create User” user “Manage users” tab

Step 2: Provide user information

CREATE NEW USER

Please fill out this form, to create a PointMatter Reporting Solutions user.
A welcome email will be sent to the created user
User can verify the email address and sign in to PointMatter Reporting Solutions.

* First Name

Last Name

* Email

Can Manage PointMatter? ☐ Yes ☒ No

- First and Last Name and email Address
- Select if the user can Manage PointMatter? if selected YES - the PointMatter Manager role will be assigned to the created user.
- Click on Register user

Step 3: A welcome email will be sent to the created user on the given email ID and User can verify the email address and sign in to PointMatter Reporting Solutions.

Activate or Deactivate a user

Use the option in Active/ InActive in the manage user list of Activate or Deactivate a user.

Active/Inactive	Actions
☐ Inactive	
☒ Active	

Deactivated users will not be able to login to the PointMatter

If a deactivated user is trying to login to PointMatter, user will get a message about deactivated account .

View and Manage Report Assignment

- Click on the “Assigned Reports” icon under the Action column.

- This will show “List of the Reports”

ASSIGN REPORTS TO USER

User Name: Email:

#	Assigned	App Name ▲	Report Name	Description	Created By
1	☐	Critical Environment	One Day - Demo Critical Room Report	October 11 Report	pmadmin@logicmatter.com
2	☐	Critical Environment	OR-1 3 Day Report	DOH - Quick Report	pmadmin@logicmatter.com
3	☒	Critical Environment	Demo Critical Environment Report	Demo Critical Environment Report. This is a Test report	pmadmin@logicmatter.com
4	☒	Critical Equipment	Demo Generator 1 Report	Demo Generator 1 Report test	pmadmin@logicmatter.com
5	☐	Energy dashboard	Demo Energy Log Dashboard Report	Demo Energy Log Dashboard Report	pmadmin@logicmatter.com
6	☐	Global Alarm Summary	Demo Global Alarm Summary Report	Demo Global Alarm Report	pmadmin@logicmatter.com
7	☐	TrendLog Dashboard	Demo OR-1 Room Trendlog Dashboard Report	Demo Trendlog Dashboard Report	pmadmin@logicmatter.com
8	☐	TrendLog Dashboard	OR Temp + Humidity	OR 1 and 2 temp + humidity	XXXXXXXXXXXXXXXXXXXX
9	☒	TrendLog Dashboard	Demo OR-2 Room Trendlog Dashboard Report	Demo	pmadmin@logicmatter.com

Activate Windows
 Go to Settings to activate Windows.

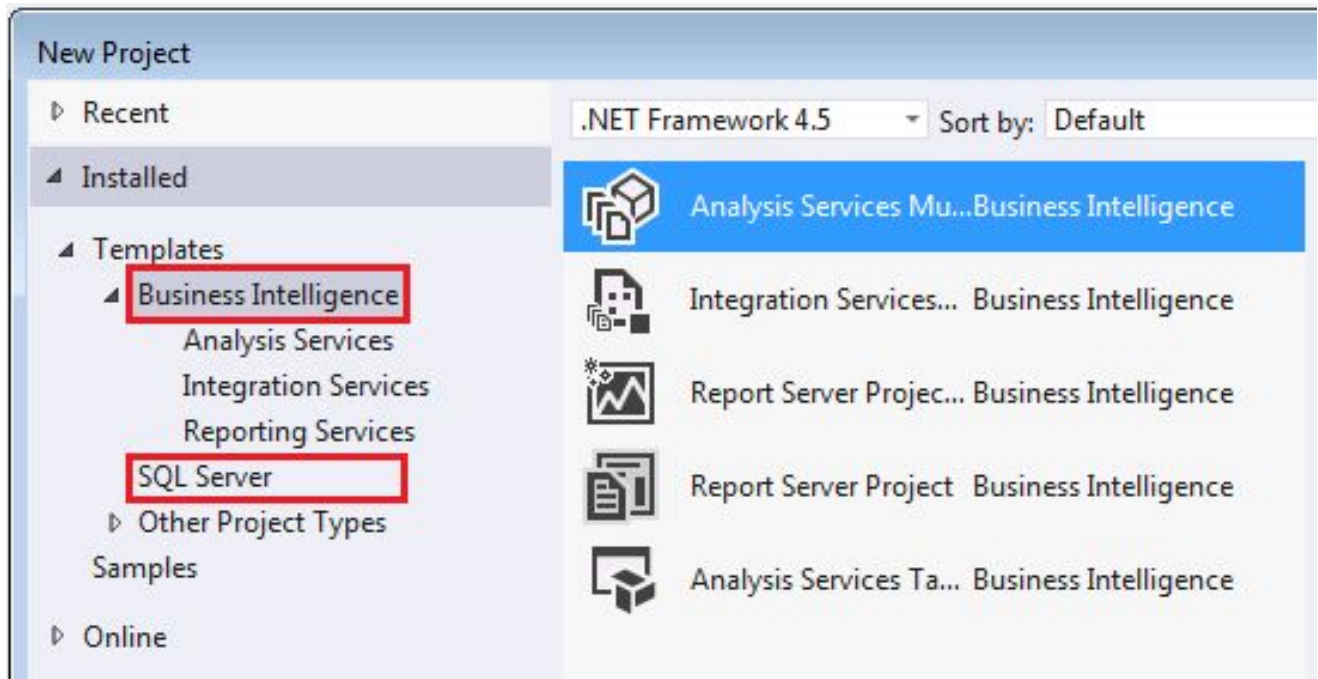

- Reports which are assigned to the user will have the “Assigned” column value as checked.
- To revoke the assignment uncheck the “Assigned” value and press “Update User Access”
- Assigned more reports to the user by Checking “Assigned” value and press “Update User Access”.

If selected user is having a Manager manager role, “Assigned” column will not be displayed for that user.

Template Management

In PRS the Apps provide the ability to extend the standard templates that are pre-configured and add new custom templates designed by Dealers/SI and FM. The PointMatter Template Authoring Guide provides guidance for anyone with basic SQL Server Data Tools (SSDT) experience to build PRS compatible Templates and deploy them using the PM Manager program.

To Author Report Templates the tools needed is SSDT for [SQL Server 2017](#) information is available on the Microsoft Website.

In the current version of PRS the Apps are able to automatically detect custom templates and list them for reporting. However for deployment the users have to either use SSDT or SSMS and the PRS guidelines to deploy and configure custom templates.

Custom Templates

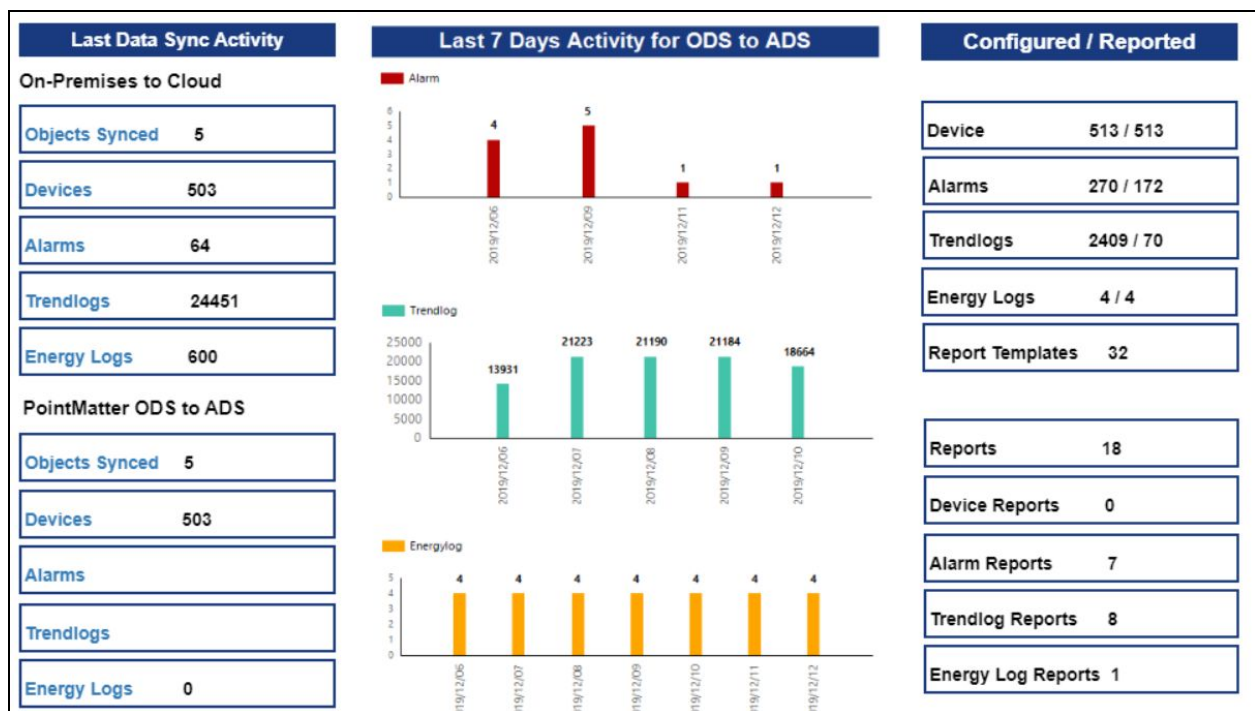

1. Install the correct 2017 version of SSDT
2. Design the custom templates as per PRS Report Authoring guidelines
3. Use steps mentioned in the PRS Template Authoring guide to deploy custom template
4. Use PM Portal and select App to create reports using the deployed custom template

System & Data Management

This section is ment for the PM Manager role to see how the data is collected from the BMS SCADA such as Compass. It provides reports to determine the performance and errors of data collection as well as report execution.

System Activity - Dashboard and SLA reports

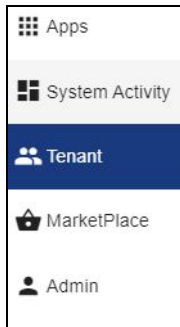

This is a report that shows the various elements of a Service Level Agreements (SLA) that Dealers can use to see how their service is doing when providing maintenance.

Tenant Information

PointMatter Manager can view the details of the configured Tenant/s along with the PointMatter configuration for the selected tenant.

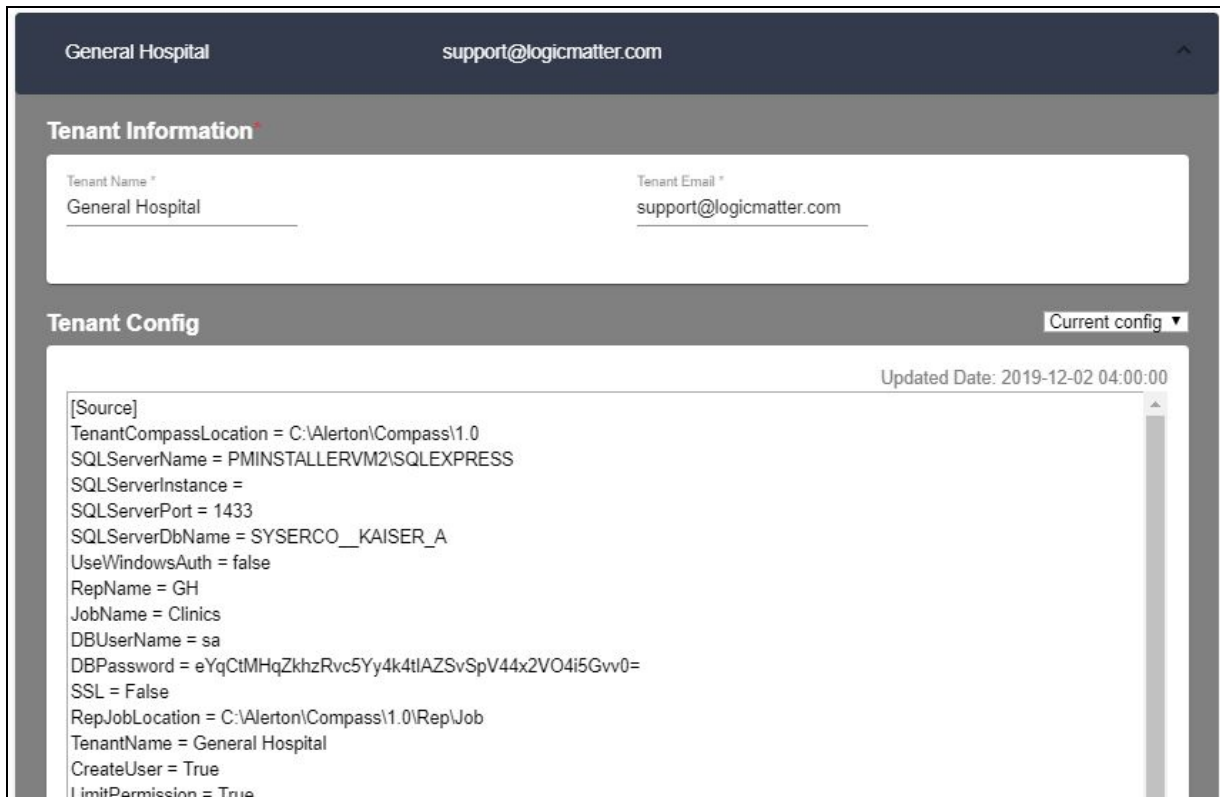

To view the tenant information click on “Tenant” in side menu bar

This will open Tenant View page, select the the tenant name

This will show the Tenant details and PointMatter configuration file information for the tenant.

Glossary of Terms

Terms	Description
ADS	Analytical Data Store is a database the stores reportable data
Alarm	An abnormal state of point or device
Apps	End user functionality delivered that has value and can be priced independently
BACnet	Building Automation Control Network protocol
BI	Business Intelligence
BMS	Building Management System
Bundle	End user Apps that combined and sold as a unit
Cloud	AWS/Azure/GCP based Cloud that is used for computing and storage
Compass	The supervisory or SCADA product from Alerton Inc
Customer	The End Customer using the product for their day to day reporting/analysis
Database	A SQL database that stores tables of information
Dealer	Channel partner of OEM
DW	Data Warehouse
Ethernet	The communication protocol between devices and systems
Event	Any state of a point or device that would be of interest to track
Features	Specific functionality that adds end user value for an App or the Platform
FM	Facility Manager
Flow	The data processing steps to imported, transformed and exported from source to target
HMI	Human Machine Interface
IaaS	Infrastructure as a Service
IIoT	Industrial Internet of Things
IoT	Internet of Things
IP	Internet Protocol
IT	Information Technology
LMI	LogicMatter Inc
LM	LogicMatter Inc

Log	A historical capture of the state of a point
Modbus/IP	Modicon Bus for Internet protocol for PLC communication
MSRP	Manufacturer's Suggested Retail Price
ODS	Operational Data Store is a database is for staging data from any source for data processing
OEM	Original Equipment Manufacturer
On-Prem	Software that can be installed on a server or Virtual Machine on premise of end user
OPC	Object Linking and Embedding for Process Control
OPC Server / Client	The software that enables data movement between systems
OPC-DA	OPC Data Acquisition
OPC-HDA	OPC Historical Data Acquisition
PDS	PointMatter Data Store contains all metadata information for a specific end user Tenant site
Platform	Software framework that hosts end user data, configuration and reports. Also provides UX
PM	PointMatter
PM Portal	PointMatter Portal or Web User Interface
PM Manager	PointMatter Manager that lets Dealers configure and setup PRS Tenants
PO	Purchase Order
Point	A tag is also a point or a specific object in a BACnet system
PointMatter	Set of tools and utilities brought together to provide a solution
Profinet	Ethernet-based communication standard in Industrial devices
PRS	PointMatter Reporting Solution pr PointMatter Reporting Software
SaaS	Software As A Service
SCADA	Supervisory Control And Data Acquisition system
SI	System integrator or Dealer
SLA	Service Level Agreement
Source	The system that provides the information needed for PRS to collect, combine and report
SPLA	Subscription Product License Agreement is a rental agreement for specific product version
Subscription	Is a monthly payment based licensing of software & services
Supplier / Vendor	LogicMatter Inc
T&M	Time and Material
Tags	A point being tracked or captured from any PLC or device

Target	The system that is fed the data or report either external to PRS or within PRS
Template	A container of structure and layout of reports or flows
Tenant	A specific BMS end user site that needs reporting and analytics
Trend	A linear plot of Logs captured for a given point
UX	User eXperience
VM	Virtual Machine
WO	Work Order generated by the Supplier against each PO

Sample Screens

1. Search for ALL

The screenshot displays the PointMatter web application interface. At the top, there is a navigation bar with the 'PointMatter' logo, a tenant dropdown menu set to 'General Hospital', and a search bar. The search bar contains the text 'All' and a search icon. Below the search bar, the text 'Showing results for "All"' is displayed. The main content area shows two sections of search results. The first section is titled 'Alarm' and lists five items: 'General_AHU-75 Supply Fan, EEO 6', 'AHU-81, Supply Fan Alarm, EEO 2', 'General_AHU-81 Return Fan, EEO 3', 'General_AHU-81 Duct Smoke Detector, EEO 4', and 'AHU-25 High Duct Humidity Alarm, EEO 11'. Below this list, there is a red box containing the text '5 of 1042' and a red box containing the text 'Show all Alarm'. The second section is titled 'Device' and lists five items: 'General Compass Server, Server', 'Device 170000', 'Compass NBT - Internal BACnet device, Compass_170900', 'General Virtual Workstation, General Virtual Workstation', and 'VAV 82-304, Room 3046'. Below this list, there is a red box containing the text '5 of 501' and a red box containing the text 'Show all Device'.

Side Navigation Menu

The left-side navigation menu is available for users with Administration roles. Below is the navigation for accounts that have Administrative privileges.

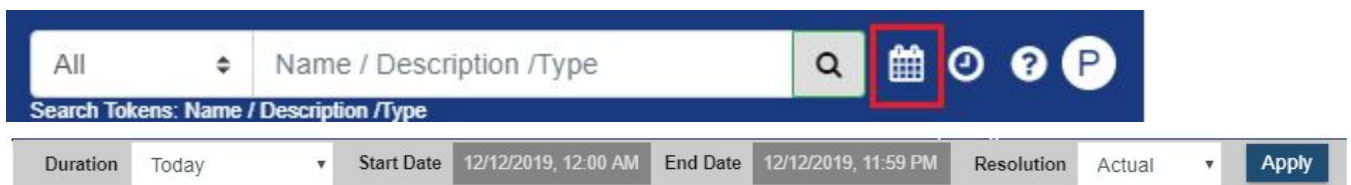

A standard user will only have access to the Apps section of the PointMatter Portal.

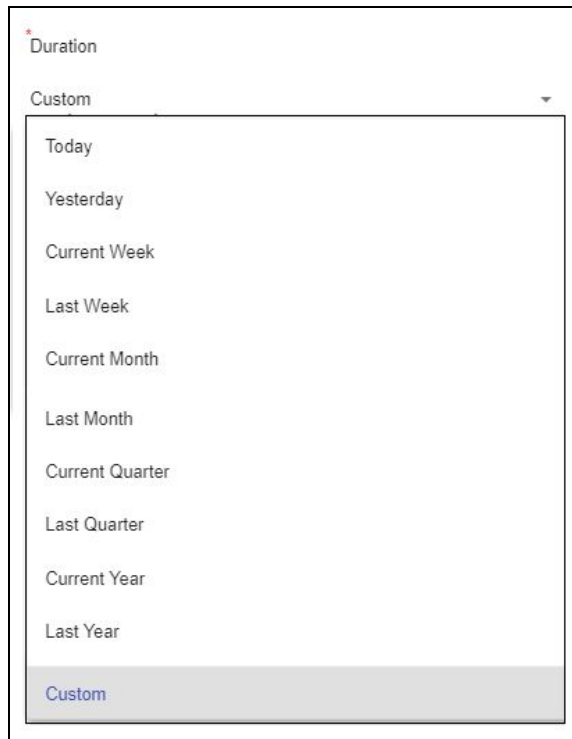

Global Datepicker

The Datepicker is in the header section that lets users pick and apply a date setting that can act as a default analysis period across Apps.

Duration

The duration allows users to pick a specific period in time. The Datepicker provides easy way to select specific periods based upon well known terms i.e yesterday, last week, etc

Resolution

The resolution determines the specific granularity of the data being visualized. It enables the system to zoom in and out of data using **averageOf (range)** type of formula on all data points selected for the duration.

The Datepicker provides an easy way to select specific periods based upon well-known terms i.e Actual, Hourly, Daily, weekly etc.
